The invention relates to human breast cancer expressed polynucleotides (AAL07544-AAL26789) and methods of assessing whether a patient is afflicted with breast cancer by examining the correlation between the expression of certain markers and the cancerous state of breast cells. The polynucleotides and encoded polypeptides are potential markers for detecting, diagnosing, monitoring, characterising treating and potentially preventing breast cancer. The polynucleotides and encoded polypeptides are also useful for isolating compounds with cytostatic activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New human proteins with hydrophobic domains, useful for the treatment of immune disorders, tumors, allergic conditions, thrombosis and microbial infection -

 (AALO7544-AAL26789) and methods of assessing whether a patient is affilicted with breast cancer by examining the correlation between the expression of certain markers and the cancerous state of breast cells. The polynocleotides and encoded polypeptides are potential markers for detecting, diagnoshing, monitoring, characterising treating and potentially preventing breast cancer. The polynucleotides and encoded polypeptides are also useful for isolating compounds with cytostatic
                                                                                                                                                                                                                                                  atgaccatgattcgagttgtgtcccataccagcgttcctcttttgctaaaaaaccctgat 588

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention relates to the isolation of novel human enzyme polypeptides (AAU22915-AAU33814), and the CDNA and genomic sequences encoding them. The enzyme polypeptides of the invention may comprise the functional classes of oxidoreductases, transferases, hydrolases, lyases, isomerases or ligases. The sequences of the invention are useful in the diagnosis, treatment, prevention and/or prognosis of a wide range of immunodeficiency disorders (e.g. AIDS) autoimmune disorders (e.g. arthritis), neurological disorders (e.g. AIDS) autoimmune disorders, metabolic disorders (e.g. AIDS) autoimmune disorders, (e.g. arthritis), neurological disorders (e.g. AIDS) autoimmune disorders, (e.g. arthritis), neurological disorders (e.g. AIDS) autoimmune disorders, (e.g. arthritis), and infectious disorders (e.g. atheroscierosis), blood-related disorders (e.g. henylketonuria), inflammatory disorders (e.g. infertility) and infectious disorders (e.g. infertility) and infertious disorders (e.g. infertility) and infertility and in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       4
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Novel polypeptides and polynucleotides useful for diagnosing, preventing, treating neural, immune system, muscular, reproductive, pulmonary, cardiovascular, renal, proliferative disorders and cancerous
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         181
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ctgccqtggtaccagcctccagcctgccccaggactgcccctgacccaggggcccgc 134

AAC74446 to AAC77606 encode the proteins given in AAB40237 to AAB43397, which represent the human ORFX open reading frames 1 to 316. The ORFX caquences have activities such as: cytostatic; hepatotropic; vulnerary; antipportatic; anticonvulsant; antiarthritic; immunosuppressant; immunosuppressant; immunosuppressant; immunosuppressant; immunosuppressant; antidiabetic; hypotensive; dermatological; antifungal; antithematic; antidiabetic; hypotensive; dermatological; antifungal; antithematic; antidiabetic; hypotensive; antidiabetic. The sequences can be used for determining the presence of or predisposition to, or preventing or treating the presence of or predisposition to, or preventing or treating pathological conditions associated with an ORFX-associated disorder. The nucleic acids can be used to express ORFX proteins in gene therapy vectors. The proteins and nucleic acids may be used to treat cancers, proliferative disorders, nucleic acids may be used to treat cancers, proliferative disorders, nucleic acids may be used to treat cancers, proliferative disorders, nucleic acids may be used to treat cancers, proliferative disorders, nucleic acids may be used to treat cancers, proliferative disorders, nucleic acids may be used to treat cancers, proliferative disorders, nucleic acids may be used to treat cancers, proliferative disorders, acidiovascular disease, cardiovascular disease, acidiovascular disease, systemic lupus crythentosus, severe combined immunodeficiency (scil), Albs. Vital, bacterial or fungal infection, malaria, autoimmune disorders, asthma, alleria, antinifilammatory disease; to enhance complaintia, antinifilammatory disease; to enhance complaintia, antinifilammatory disease; to enhance

The present sequence is human drug metabolising enzyme (DME-17) cDNA.

Human DME and its nucleic acid molecule are useful for the diagnosis,

treatment and prevention of disorders associated with increased or

decreased expression of DME. Examples of such disorders include,

autoimmune/inflammatory disorder such as acquired immune deficiency

syndrome (AIDS), rheumatoid arthritis, osteoporosis; cell proliferative

clisorder such as actinic keratosis, atherosclerosis; cell proliferative

disorder such as epilepsy, anaemia; endocrine disorder such as

acromegaly, cretinism, thyrotoxicosis; pancreatic disorder such as

caromegaly, cretinism, thyrotoxicosis; pancreatic disorder such as

metabolic disorder such as Addison's disease, obesity; gastrointestinal

disorder such as anorexia, dysphagia and hepatic tumours including

codular hyperplasia, adenomas and carcinomas. DME DNA is useful for

creating 'knockin' humanised animals (pigs) or transgenic animals

creating who model human disease. DME DNA is also in useful is gene

therapy. DME and its immunogenic fragments are useful for screening
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   463

primers AAS45925-AAS46231 represent DNA molecules encoding and PCR primers for PRO polypeptides of the invention. The sequences of the invention can be used to detect the presence of a tumour in a mammal by comparing the level of expression of a PRO polypeptide in a test sample of comparing the level of expression of a PRO polypeptide in a test sample of commal cells from the animal and a control sample of normal cells, whereby a higher level of expression in the test sample of normal cells, whereby a higher level of expression in the test sample of normal cells, whereby a cumour in the mammal. Mammals include dogs, cats, catie, horses, sheep, pigs, goats and rabbits but are preferably human. The polypeptides can be used to stimulate thumour necrosis factor (TNF) alpha release from human blood, when contacted with it. A specific polypeptide can be used to etimulate the proliferation of differentiation of chordrocyte cells. The PRO proteins can be used to determine the presence of tumours and also susceptibility to tumour development, particularly adrenal, unng, colon, breast, prostate, rectal, cervical, or liver tumours, in mammalian subjects. The oligonucleotide probes specific for the PRO nucleic acids can be used for genetic analysis of individuals with genetic disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Novel nucleic acids encoding PRO polypeptides, used to diagnose the presence of tumnours, such as prostate and breast tumours, in mammals and to screen for modulators of the compounds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Baker KP, Chen J, Desnoyers L, Goddard A, Godowski PJ, Gurney AL;

/note="Organ: breast; Vector: puc18; Site_1: SmaI; Site_2: SmaI; A mini-library was made by cloning products derived from ORESTES PCR (U.S. Letters Patent application No. 196, 716 - Ludwig Institute for Cancer Research) profiles into the pUC 18 vector. Reverse transcription of tissue mRNA and cDNA amplification were performed under low stringency conditions.
